

# TOOLS

A COMPLETE LINE OF SLOTTING TOOLS

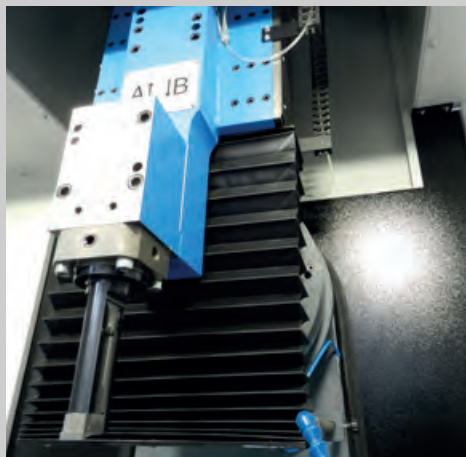

## STABLE AND REPEATABLE SYSTEMS

Each Cabe machine is characterized by a wide range of accessories, including hand tools for slotting machines studied by Cabe and fixing and replacement systems on the machines, that are immediately patented.

The technical team studies the types of processes necessary for the client and provides the most suitable custom tools for the material or the cutting speed required. Combined with the toolholder block with high repeatability, the tools are always positioned at the centre of the hole.

## NEW LINE OF TOOLS

### TOOL HOLDER BLOCK

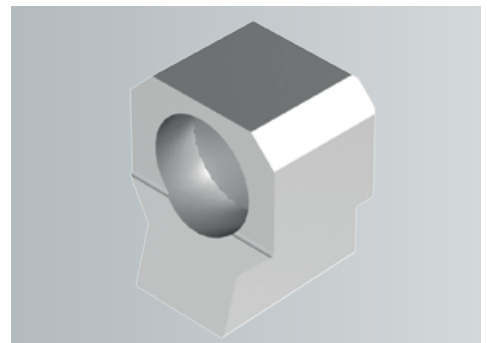

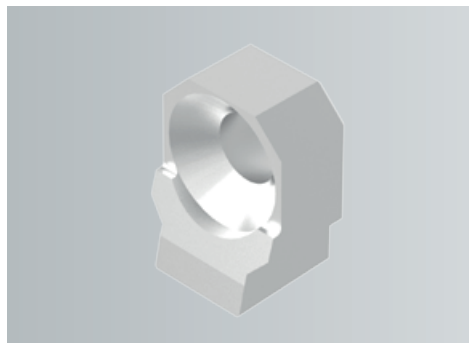

The innovative tool holder with high repeatability guarantees that the tools are always at the centre of the hole.

Combined with the tool holder, the "VCT" system, virtual tool change, allows two processes with different tools without having to stop the machine to make the change. Both are Cabe patents.

### SUPPLY SYSTEM

The new line of tools for the slotting machine is characterized by an advanced internal refrigerant cooling system that helps the chip leakage during machining.

### TOOLS SERIES BA4 - BA25 mm

Code boring bar	Dimensions (mm)	Insert code
	LI	
BA4*	60	UT4
BA5*	60	UT5
BA6	70	UT6
BA8	80	UT8
BA10	80	UT10
BA10L	135	UT12
BA12	110	UT14
BA12L	190	UT16
BA14	110	UT18
BA14L	190	UT20
BA16	120	UT22
BA16L	210	UT25
BA18	135	
BA18L	225	
BA20	145	
BA20L	245	
BA22	145	
BA22L	245	
BA25	200	
BA25L	300	

Each tool is available to process different materials: the type of material must be declared at the time of order.  
Special tools on request: contact our technical department for more details.  
Tools made for holes according to the UNI6604 Regulation.

\*Available also with stiffener.

With H7 tolerance available on stock, other tolerances available within 10 working days.
